## 作品赏析

I think the proposal of this activity which is better about environment. I think the best proposal is reduce carbon release.

There are a lot of reasons. First, the carbon releasing will make the temperature raise. If the temperature is raised, the ice in north pole will be warmed. The harmful things will enter the sea. This will harm our life. Beside, the carbon releasing is harming our air. A lot of micro-things will enter our lungs. Then we will be sick. Finally, reduce carbon releasing can reduce the borden of plants. If the borden of plants are reduced, the environment will be better.

This is my propal, if you think it value, then you can receive it. if you have any other advise, you will contact me anytime.

Knowing that you have a passion for proposal activity, I am more than delighted to provide you with some conductive suggestions.

With the problem of pollution become worse than before, it is teenager's duty to propose a "eco-lifestyle" plan. Specifically, reducing the emission of CO<sub>2</sub> from the car and creating more eco-friendly and relieving energy cars. To close the teenager's life, we can carry out an "eco-farm" project, where we can plant trees, water flowers and experience labor.

The reasons are as follow. Not only can it improve our life quality, but also can it creat more beautiful atmosphere. What's more, in my opinion, it is a golden chance for teenagers to cultivate "eco-lifestyle" awareness and have a deeper understanding of "green".

Looking forward to your reply!

I'm thrilled to hear that you're engaging the proposal activity of united nations, and I can't wait to share my suggestions.

I recommend to propose a "greener Earth", which contains cutting pestrol usage, encouraging greener power and build natural habitats for endangered animals.

The reasons are as follows. As we all know, our planet is suffering from serious eco-problem. Pollutions are ruining our atmosphere, animals are forced to leave their homes, and people's awareness of protecting environment is weak. Thus, this proposal will enhance people's actions of protecting environment, which will be of vital to stop pollution, live in harmony with nature, and create a better future for ourselves and next generations. This proposal will be of great significance to the United Nations.

Hope my advice can be helpful, and wish your proposal success.

I am writing to share with you my ideas for the UN proposal.

Why not propose to worldwide teenagers to offer a helping hand to children in poverty-stricken areas? Remember the photos I've shared with you, depicting Africa's kids' tough living conditions? We're blessed to live in prosperous nations, yet kids in Africa are suffering from material deprivation and emotional hardship, right now! Support and help are in urgent demand, if all of us act, it's quite feasible.

So as teens, you can advocate launching donation drives on campus to collect second-hand books and out-grown clothes, providing direct material support. Also, why not call on worldwide organizations to shoulder responsibility to connect us with them to form pen-pal relationships. What we do might seem insignificant, but the care and warmth we instill in them will definitely light up their days and arouse their yearning for a colorful future!

What do you think? Will my idea for the proposal be of help? I eagerly await your creative thoughts and positive feedback.
